

Annalisa Simonella

Graduated with a Master in Building Engineering at the University of Padova in April 2001, focusing in passive and low energy architecture collaborating with specialised architectural practices.

Since October 2001 she is working in the Research & Engineering Department of Permasteelisa, a world leading company designing advanced building envelopes. She is currently investigating the impact of different façade types on the whole energy and comfort performance of buildings with as main activities daylighting analysis and dynamic building simulation.
