NAME

   x11meta - output metafile graphics to X11

SYNOPSIS

   x11meta [**−c** | **−r**] file ..

DESCRIPTION

   X11meta reads each metafile *file* in sequence and sends it to the default X window system. If the option *c* is specified, the input files are only conditioned for output, ie. expanded and sorted (see pexpand and psort). If the option *r* is instead specified, the input is assumed already to be conditioned. If no input files are specified, the standard input is read.

   −c   Condition the input only.

   −r   Input is already conditioned, output only.

EXAMPLE

   To plot the chart example.bar:

      bgraph example.plt | x11meta

FILES

   see pexpand(1) and psort(1)
