

NAME

cv - convert between metafile formats

SYNOPSIS

cv [-r][file ..]

DESCRIPTION

Cv reads each human readable metafile *file* in sequence and converts it to a binary form. If the option *-r* is specified, the reverse conversion is performed.

If no input files are specified, the standard input is read.

EXAMPLE

To convert the binary file meta.bin to its human-readable equivalent, and put the result in meta.human

```
cv -r meta.bin > meta.human
```
