

NAME

x11meta - output metafile graphics to X11

SYNOPSIS

x11meta [**-c** | **-r**] file ..

DESCRIPTION

X11meta reads each metafile *file* in sequence and sends it to the default X window system. If the option *c* is specified, the input files are only conditioned for output, ie. expanded and sorted (see *pexpand* and *psort*). If the option *r* is instead specified, the input is assumed already to be conditioned. If no input files are specified, the standard input is read.

-c Condition the input only.

-r Input is already conditioned, output only.

EXAMPLE

To plot the chart *example.bar*:

```
bgraph example.plt | x11meta
```

FILES

see *pexpand*(1) and *psort*(1)
