

NAME

epw2wea - weather file converter

SYNOPSIS

epw2wea [**-a**] **file_name.epw** [**file_name.wea**]

DESCRIPTION

epw2wea transforms an EnergyPlus weather data (.epw) file into the DAYSIM weather file format, for use with the RADIANCE *gendaymtx* and *gensdaymtx* programs.

The *-a* option adds atmospheric data needed by *gensdaymtx* to generate full spectral data.

If no output file is given, the standard output is written instead.
