

**NAME**

pflip - flip a RADIANCE picture.

**SYNOPSIS**

**pflip** [ **-h** ][ **-v** ][ **-c** ] **input** [ **output** ]

**DESCRIPTION**

*Pflip* flips a RADIANCE picture horizontally and/or vertically. The *-h* option results in a horizontal exchange, and the *-v* option results in a vertical exchange. Both options may be applied.

The *-c* option indicates that the action is to correct an improper original image orientation, thus the recorded scanline ordering should not be changed.

If the *-v* option is not specified, the input may be piped from stdin.
