NAME
pflip - flip a RADIANCE picture.

SYNOPSIS
pflip [ −h ][ −v ][ −c ] input [ output ]

DESCRIPTION
Pflip flips a RADIANCE picture horizontally and/or vertically. The −h option results in a horizontal exchange, and the −v option results in a vertical exchange. Both options may be applied.

The −c option indicates that the action is to correct an improper original image orientation, thus the recorded scanline ordering should not be changed.

If the −v option is not specified, the input may be piped from stdin.
